As given,  $E$  is  $1.2 \times 10^5$  V/m, ...

There are two type of mica capacitor. 1.2.2.1. Clamped Mica Capacitor 1.2.2.2. Silver Mica Capacitor. 1.2.2.1) Clamped Mica Capacitors. These types of capacitors were used in the early 20 th century. They were constructed from thin sheets of mica and metal (usually copper) foil. These sheets and foils are stacked together and clamped.

A capacitor is a device used to store electric charge. Capacitors have applications ranging from filtering static out of radio reception to energy storage in heart defibrillators. Typically, commercial capacitors have two conducting parts close to one another, but not touching, such as those in Figure (PageIndex{1}).

In this chapter we introduce the concept of complex resistance, or impedance, by studying two reactive circuit elements, the capacitor and the inductor. We will study capacitors and inductors using differential equations and Fourier analysis and from these derive their impedance.
