For deep cycle batteries the standard rating is 20 hours. So, if a battery has a rating of 100AH @ 20Hr rate, then that battery was discharged over 20 hours with a 5 amp load. Starting batteries, on the other hand, are typically rated at 10Hr rate, because they are used faster, so the 20Hr rate is not as important.

Before directly jumping to know the concepts related to lead acid battery, let us start with its history. So, a French scientist named Nicolas Gautherot in the year 1801 observed that in the electrolysis testing, there exists a minimal amount of current even when there is a disconnection of the main battery.

The specific gravity of a fully charged lead-acid battery is typically around 1.265, while a discharged battery may have a specific gravity of 1.120 or lower. The specific gravity readings of all the cells should be within 0.050 of each other.
