Solar panels output more than their nominal voltage. For example, a 12v solar panel might put out up to 19 volts. While a 12v battery can take up to 14 or 15 volts when charging, 19 volts is simply too much and could lead to damage from overcharging. Solar charge controllers aren't an optional component that delivers increased efficiency.

the 12V Solar Panel and Charging Kit, are essential components of solar panel energy systems. Let's break down some key points: The Photovoltaic Effect: PV panels are made up of layers of semi-conducting material, primarily silicon. When sunlight interacts with these materials, it triggers the photovoltaic effect, leading to the generation of electricity.
