tipo de panel es, 12V, 24V o el que sea. Para ser un panel de 12V la cifra debe estar entre 15 y 19V, mientras que para que sea de 24V esta cifra debe estar entre 36 y 39V. Esto es así; porque en aislada, el voltaje que ofrece el panel siempre debe ser ...

This is done by multiplying the short-circuit current of your whole solar array by 1.25 (NEC's safety factor). For example: Consider 2 parallel wired solar panels, and each of these panels had a short-circuit current of 5.8A. The amperage rating of the PWM charge controller can be calculated as follows: PWM Amperage rating = $2 \times 5.8A \times 1.25$
