I do not want to create a system with a bank of deep cell batteries, a charge controller, solar, and an AC inverter (yet). I just wanted to learn what it would take to charge the Ryobi batteries directly from solar. I think the 18v battery is the easiest because Ryobi has created an In-Vehicle charger.

During bulk charging, the switch remains turned on, ensuring constant amps while lowering the higher voltage from the solar cells to match the battery voltage. For example, an 18V 100W solar panel generates 25V (open circuit voltage) and supplies 4.1 amps.
