3 Development of Charging Pile Energy Storage System 3.1 Movable Energy Storage Charging System At present, fixed charging pile facilities are widely used in China, although there are many limitations, such as limited resource utilization, limited by power infrastructure, and limited number of charging facilities.

In this calculation, the energy storage system should have a capacity between 500 kWh to 2.5 MWh and a peak power capability up to 2 MW. Having defined the critical components of the charging station--the sources, the loads, the energy buffer--an analysis must be done for the four power conversion systems that create the energy paths in the station.

The traditional charging pile management system usually only focuses on the basic charging function, which has problems such as single system function, poor user experience, and inconvenient management.
