For a 12-volt lead-acid battery, the voltage will be between 11 and 13 volts, depending on the charge. The closer it is to 13 volts, the closer it is to being fully charged. A battery at 11 volts needs recharging. The exact voltage will differ depending on the battery voltage, style, and age.

When comparing a 60V 100Ah lithium battery to other types, it's essential to consider energy density. Lithium batteries typically offer higher energy per weight than lead-acid alternatives. This means you get more power without the bulk. Lead-acid batteries are often cheaper upfront but have shorter lifespans and lower efficiency.
