Capacitors, or &quot;caps,&quot; are simple electronic components that are typically used in guitar electronics as filters or barriers for certain frequencies. High frequencies will pass through a cap, while lower frequencies are blocked. The value of the capacitor will determine the frequencies that pass (refer to Diagram #7).

Type of Capacitor Bank as per Its Application 1. Fixed type capacitor banks. The reactive power supplied by the fixed capacitor bank is constant irrespective of any variations in the power factor and the load of the receivers. These capacitor banks are switched on either manually (circuit breaker / switch) or semi automatically by a remote-controlled contactor.

2. Class 2 and 3 capacitors Class 2 and 3 capacitors with temperature characteristics B, E and F have an aging characteristic, whereby the capacitor continually decreases its capacitance slightly if the capacitor is left on for a long time. Moreover, capacitance might change greatly depending on the surrounding temperature or an applied voltage.
