with liquid electrolyte. There is another type of aluminum electrolytic capacitor that uses solid electrolyte. 1. General Description of Aluminum Electrolytic Capacitors The capacitance of an aluminum electrolytic capacitor may be calculated from the following formula.  $C = 8.854 \ 10 \ (F) \ (1 - 1) \ eS \ d--12 \ e$ : Dielectric constant of dielectric

An aluminum electrolytic capacitor comprises a dielectric layer of aluminum oxide (Al 2 O 3), the dielectric constant (e) of which is 8 to 10. This value is not significantly larger than those of other types of capacitors. However, by extending the surface area (S) of the aluminum foil
