Battery comes from a Middle French word meaning bombardment or assault. This is most likely why the word is most often used with "battery of questions" or "battery of tests" to imply that one has been bombarded with many questions or tests. In addition, in modern English we still use battery in the context of "assault and battery." ...

For starters, purchase the right battery for your vehicle. For example, if you live in an area with harsh winters, you want the best car battery for cold weather. Additionally, you don't want to overcharge the car battery. Not only do you want to have the best battery charger hooked up, but you should know how long it takes to charge a car battery.

Most lithium comes from Australia, Chile and China, which also dominates in processing lithium and making batteries. ... An electric battery is a compact sandwich of metal sheets, foils and films ...

About 40 percent of the climate impact from the production of lithium-ion batteries comes from the mining and processing of the minerals needed. Mining and refining of battery materials, and manufacturing of the cells, modules and battery packs requires significant amounts of energy which generate greenhouse gases emissions.
