The world"s reliance on always-on technology keeps growing. Yet, the electrical infrastructure powering our wireless networks holds us back. 5G will require more of everything: RF equipment and frequencies, radios and remote radio units (RRUs), and hundreds of thousands of small cells.

One cabinet should be able to hold at least one complete string of cells. Best practice is that strings should not be split between two cabinets in order to ensure reliability of the entire string. Figure 1 - Battery cabinet with top terminal cells. A battery disconnect switch should be located as closely as possible to the end of a string.
