2. Power Adapter. It is possible that the power adapter is loose. Duh. In case you have already checked, maybe the power adapter is simply not working which means the battery is not getting charged.

Why Battery Level Monitoring is Important. Have you experienced building a battery-operated project then suddenly it won"t work because it needs to be charged? We all know that batteries come with a certain voltage limit. Exceeding or completely losing the battery"s voltage can lead to a lot of frustration, component damage, or data loss.

They may also be used for tasks beyond anomaly detection such as battery capacity degradation prediction. Fig. 1: EV dataset and challenges in fault detection.
