sipated power due to the internal impedance of the battery. The SoH in such applications is defined as a function of the increase of battery impedance compared to the reference value [3]. Since $P = UI$ and $U = RI$, where R is the total battery resistance as a function of SoC and temperature, equation (2) becomes $\text{SoH power} = \frac{U^2}{R} \times \frac{R_0}{U_0^2} = \frac{R_0}{R} \times \frac{U_0^2}{U^2} \dots$
