The Science Behind Shrink. Shrink wrap (also referred to as shrink film or shrink wrap) is a versatile polymer material used for the packaging of finished goods. Heat is applied to the film - by either a conveyor heat tunnel or an electric or gas heat gun - which catalyzes the film to shrink tightly around the item placed within.

perforated shrink film is available by many suppliers for this reason. POF is made of 100% recyclable materials. With its superb clarity and glossy shelf appearance, this shrink film is optimal for consumer products for which presentation is critical. It's also good for bundling multiple items together, like tissue boxes. POF is durable and less
