I bought the car originally with a 2zz swap and ran it for a couple years. But, there were always issues with the wiring and I had to correct some wiring mistakes from whoever did the swap.

When you are hooking batteries up in a series there is one battery that has the negative wire connected to the ground. That battery then has its positive terminal connected to the negative terminal on the next battery in the series. The positive terminal in that second battery is then hooked up to the 12-volt system and you should be good to go.

1 - Harness, PN 8860 WARNING: During installation, disconnect the battery cables. When disconnecting the battery always remove the Negative cable first and install it last.
