The input and output of power for batteries in consumer electronics can be measured in various units, such as volts (V), amperes (A), and watt-hours (Wh). Input power refers to the amount of power required to charge the battery, while output power refers to the amount of power the battery can deliver to the device.

The input/output characteristics of a battery determine its ability to charge and discharge electrical energy. The input refers to the supply of power to the battery for charging, ...

o Power Density (W/L) - The maximum available power per unit volume. Specific power is a characteristic of the battery chemistry and packaging. It determines the battery size required to ...
