Above the battery pack, a condenser is installed within the container, consisting of a cold plate (water) and two heat-dissipating fins, connecting to an external low-temperature thermostat bath (Tenlin, DC-2006) through pipelines. A circulating system is established, where cooling water from the low-temperature thermostat bath is powered ...

When compared to lead-acid batteries, LiFePO₄ batteries have a higher energy density so are able to store more energy per unit volume and weight. For the same energy capacity, LiFePO₄ batteries will result in a smaller battery pack than Lead-acid batteries. However, Lead-acid batteries are heavier and bulkier.
