Copper indium gallium diselenide (CIGS) is preferred for its high efficiency. It can be put on flexible stuff, allowing for light, custom solar panels. This power makes CIGS a driving force in growing the thin-film solar market. Emerging Semiconductor Technologies. Today, we mostly use silicon and thin-film semiconductors in solar cells.

This paper aims to provide a study and a realization of a reliable standalone solar battery charging system, it is the main unit of the independent PV systems, used to manage the power sent from ...

I don't want expensive/proprietary/wasteful equipment between the leaf's charge controller and solar panels. Just a dumb old ~400-500VDC solar plug waiting for a device to accept power. Any details/thoughts from those with a better idea of the Leafs internals? Example of why I don't want inverter charging...
