Battery energy storage systems, or BESS, are a type of energy storage solution that can provide backup power for microgrids and assist in load leveling and grid support. There are many types of BESS available depending on your needs and preferences, including lithium-ion batteries, lead-acid batteries, flow batteries, and flywheels.

Overview Safety Construction Operating characteristics Market development and deployment See also Most of the BESS systems are composed of securely sealed battery packs, which are electronically monitored and replaced once their performance falls below a given threshold. Batteries suffer from cycle ageing, or deterioration caused by charge-discharge cycles. This deterioration is generally higher at high charging rates and higher depth of discharge. This aging cause a loss of performance (capacity or voltage decrease), overheating, and may eventually le...
