Distributed Energy Resource (DER): Small-scale energy resources, such as rooftop solar photovoltaic (PV) panels and BESS, usually situated near sites of electricity use. Energy Management System (EMS): A system to monitor, control, and optimize DER usage. Energy Storage System (ESS): One or more components assembled or connected to store energy.

Energy storage devices can manage the amount of power required to supply customers when need is greatest. They can also help make renewable energy--whose power output cannot be controlled by grid operators--smooth and dispatchable. Energy storage devices can also balance microgrids to achieve an appropriate match of generation and load....
