Floppy vibrato-arm fix. We call this the "Hammer Trick". A drop-in vibrato arm that won't stay put is a symptom of a poor fit between the arm and its collet. To remedy this, you'll need a vice and a hammer. Place the arm in the vice with about an inch of the inserted end poking out, then give it a good whack with a hammer.

Understanding 240V Capacitor Start Motors and Wiring Diagrams. A capacitor start motor is a motor with a capacitor that helps start the motor by creating a strong magnetic field when first energized. These motors are typically single-phase induction motors with two windings, one for starting and one for powering the motor after it starts.
