To discharge a capacitor, it's important that you keep your hands clear of the terminals at all times or you could get badly shocked. Also, make sure you're using an insulated screwdriver that has no signs of damage on the handle. When you're ready, start by gripping the capacitor low on the base with one hand. Then, lay the screwdriver across ...

In a cardiac emergency, a portable electronic device known as an automated external defibrillator (AED) can be a lifesaver. A defibrillator (Figure (PageIndex{2})) delivers a large charge in a short burst, or a shock, to a person's heart to correct abnormal heart rhythm (an arrhythmia). A heart attack can arise from the onset of fast, irregular beating of the heart--called cardiac or ...
