The Google Maps Capacitor plugin ships with a web component that must be used to render the map in your application as it enables us to embed the native view more effectively on iOS. The plugin will automatically register this web component for use in your application.

Installing plugin in Capacitor is a little different from Cordova. Since Cordova considers the platform code as build time asset, it compiles the platform every time a build is made. Capacitor works differently. It compiles the platforms once, and further changes can be simply copied into the platforms using npx cap sync. Plugins are installed as npm or yarn package in Capacitor. ...

Members Value Description Since; Body "body" Only the body HTML element will be resized. Relative units are not affected, because the viewport does not change. 1.0.0: Ionic "ionic" Only the ion-app HTML element will be resized. Use it only for Ionic Framework apps.
