How To Identify the Positive and Negative Terminals of a Capacitor? To identify the positive and the negative terminals of a capacitor, you have to look for a minus sign or a large stripe, or both on one of the capacitor's sides. The negative lead is closest to the minus sign or the stripe, while the unlabeled lead is the positive one.

A parallel combination of three capacitors, with one plate of each capacitor connected to one side of the circuit and the other plate connected to the other side, is illustrated in Figure (PageIndex{2a}).
