The 200 watt solar panel wiring diagram assumes 2 x 100w panels are being fitted. If you happen to be fitting 1 x 200w panel instead, see our 100 watt solar panel wiring diagram. We've included 2 diagrams below. The first shows a 200w solar panel set up wired in series. In the 2nd diagram, they're wired in parallel.

Schematic for Wiring Solar Panels in Series. Wiring solar panels in series (plus to minus) will increase the volts, but leave the amps the same. For example, wiring two 18V solar panels together as shown will increase the output from 18V to 36V, but the current will stay at 5.5A. Schematic for Wiring Solar Batteries in Series

I am not sure why you said 2pcs of 120ah12V batteries in series. He needs batteries to supply the 1500w loads for 12hours at night. Basically that is $1500w * 12 = 18000wh$. dividing by 50% depth of discharge as you choose flooded, that is $18000/0.5=36000wh$ or divide by 0.8 if for AGM batteries, that is $18000/0.8 = 22500wh$.

Solar Panel Basics: Solar panels are composed of multiple photovoltaic cells, which are made from semiconducting materials like silicon. When sunlight hits these cells, it excites the electrons in the material, generating an electric current. The combined power output of the cells in a panel is measured in watts. For example, a 100-watt solar panel can produce up to 100 watts of ...

A Single Line Diagram (SLD) (also know as Schematic Diagrams) is a simplified representation of the components in an electrical system and denotes how the components are laid out. It can also give key information on installation details including voltage and current of stringing in the system. Generally it is used to communicate with an installer how the system will be connected.
