When an EV is connected to the charging pile for charging, the real-time load is integrated by the charging aggregator, and the power is transmitted to each charging pile interface to charge the EVs. For an EV charging network, here we consider EVs and charging aggregators as nodes and the roads between them as edges.

A charging pile, also known as a charging station or electric vehicle charging station, is a dedicated infrastructure that provides electrical energy for recharging electric vehicles (EVs) is similar to a traditional gas station, but instead of fueling internal combustion engines, it supplies electricity to recharge the batteries of electric vehicles.
