[QUOTE] paulr said: So with a 1 farad capacitor, if you discharge it at 20 mA, that's 0.02 coulombs/sec so the voltage drops by 0.02 volts per sec. That means in 50 seconds it drops by 1 volt. So if you charge it up to 5 volts from the USB port, and (to simplify) assume constant current discharge down to 3.5 volts (the V_f of a led) at 20 mA, then that's about 75 ...

Supercapacitors, also known as electrochemical capacitors, electric double-layer capacitors, gold capacitors, and farad capacitors, are electrochemical components developed from the 1970s and 1980s that use polarized electrolytes to store energy. This article will tell you the advantages of supercapacitors, its discharge and control time.

stryker0z: [quote author=ebay-seller] no worry about the quality. My mind is at ease now [/quote] Joking aside, they actually sell them on digikey, etc:

High power, high energy and long-term reliability feature of LS Ultracapacitor (Supercapacitor) enable this component to use in various applications as backup power unit, auxiliary power ...

the old idea of 1 farad for 1000w is not good enough. if you want to make a good diff, it needs to be more like 1 farad for every 10 amp draw. which can be in the form of another battery, or a whole trunk of 1 farad dielectric's. but everything needs to be considered on the whole. it's amazing how good a stock alt can do with a good battery and huge + and - wires ...
