The heart of this device is the MOS capacitor, which we will study today. To analyze the MOS capacitor we will use the same depletion approximation that we introduced in conjunction with p-n junctions. Clif Fonstad, 10/8/09 Lecture 9 - Slide 3 . The n-MOS capacitor Right: Basic device

A parallel plate capacitor is filled with a dielectric medium of dielectric constant 2.6. The distance between the plates of the capacitor is 0.0002 m. Find the plate area, if the capacitance of the capacitor is 3.4 mF. Ans. Given. The capacitance of the parallel plate capacitor, $C = 3.4 \text{ mF} = 3.4 \times 10^{-6} \text{ F}$; Dielectric constant, $k = 2.6$

An AC ammeter connected in the circuit would indicate a current flowing through the capacitor, but the capacitor has an insulating dielectric between the two plates, so it is a displacement current that the ammeter records. The value of this current is affected by the applied voltage, the supply frequency, and the capacity of the capacitor.
