Coupling capacitor voltage transformers (CCVT) are the predominant devices used in high voltage systems to provide scaled down voltage signals for metering, protection and control devices.

In this coupling scheme, coupling capacitors are not used and we use transformers. For coupling the input signal to the base of the transistor Q 1 transformer T 1 is used. Transformer T 2 is used for inter-stage coupling between first and second stage and transformer T 3 is used for delivering the Q 1 output to the load.
