A single capacitor, located in the conduit box, is used to regulate the voltage to within 5% at rated load Use extreme caution when handling capacitors The capacitor will still contain high voltage even after the engine has stopped operating Always discharge the capacitor before handling Use

Re: capacitor banks yes this is 480 v 3 phase. They are recommending 2 ea 200 kvar @480 v 3 phase. Also I did not think this out too well either. the other postewr is correct I cannot use just single 400 mcm per phase to feed each unit as my conductor would then be overprotected by the main disc. duh.The cap banks are I think self contained 3 phase units.
