Yes, charging your phone overnight is bad for its battery. And no, you don't need to turn off your device to give the battery a break. Here's why.

What does a backup battery do? If you choose to buy a battery backup it will improve your chances of retaining telephone service for at least 24 hours during a power outage.

To protect your smart home from power outages, install a battery backup system in the communication cabinet. Select a UPS (Uninterruptible Power Supply) that can support the power requirements of your devices. Connect critical components such as the network equipment, video distribution system, and audio equipment to the battery backup system.

The Outdoor Telecom Cabinet system includes rectifier modules, monitoring unit, power distribution units, battery packs, temperature control and other equipment, they are installed in an all in one outdoor cabinet. The all in one outdoor cabinet is divided into an equipment compartment, a battery compartment, and a wiring channel.

This is partially because it is designed for mobile use. Cell networks are designed to allow users to seamless transfer from tower to tower. There is a lot of delay built into the technology to allow this. You don't care about this feature since you are not moving around but the overhead is still built into the system.

Battery cabinets should be equipped with a failsafe locking system, to prohibit unauthorised entry to the lithium ion battery stores. Staff need to be responsible for the keys when they're using the cabinet, and should fill out a log book or register each time they access the keys.
