Flexible adjustment by potentiometer, choice of 6 ranges: AC 0.05-0.5A; AC 0.1-1A; AC 0.2-2A; AC 0.5-5A; AC 0.8-8A; AC 1.6-16A; Power up delay. Possible to use for current scanning from current transformer. Universal supply AC/DC 24 - 240 V. Relay status is indicated by LED. 1-MODULE,DIN rail mounting.

The relay can be used for AC or DC. The AC input can be single- two- or three-phase, with or without neutral. The relay may also be used as an instantaneous single-phase undervoltage relay. In case of three-phase undervoltage applications using one relay only, the relay will set required undervoltage in all phases in order to operate.

In addition, relays used for the AC side (for switching alternating current loads) of a power storage system are required to provide high capacity AC cutoff capabilities and high reliability since they are used as safety cutoff relays for power grids to prevent abnormality in consumer side circuits from impacting commercial power supply ...

The AC Relays/Contactors circuit applies the AC charging power to the AC output stage for vehicle charging. This circuit also provides a safety cutoff if an abnormal condition is detected. Select high current contactors up to 40A in either single-pole or two-pole configurations to interrupt the high line output or both high and low output.
