A high-voltage energy storage system (ESS) offers a short-term alternative to grid power, enabling consumers to avoid expensive peak power charges or supplement inadequate grid power during high-demand periods. These systems address the increasing gap between energy availability and demand due to the expansion of wind and solar energy generation.

The power something like a lamp or electric motor produces (or consumes) is proportional to the voltage across it, so a bigger voltage usually means more power. In other words, high-power gadgets (ones that need more energy and electrical "force") tend to need higher voltages than low-power ones, which is
