

Energy Storage Charging Pile Management Based on Internet of Things Technology for Electric Vehicles Zhaiyan Li 1, Xuliang Wu 1, Shen Zhang 1, Long Min 1, Yan Feng 2,3,\*, Zhouming Hang 3 and Liqiu ...

This paper proposes an error detection procedure of charging pile founded on ELM method. Different from the traditional charging pile fault detection model, this method ...

detection of the charging pile equipment. The active energy value displayed by the camera on the charging pile is obtained through the convolution neural network (CNN) algorithm, and the ...

TL;DR: In this paper, a mobile energy storage charging pile and a control method consisting of the steps that when the mobile ESS charging pile charges a vehicle through an energy storage battery pack, whether the current state of charge of the ESS battery pack is smaller than a preset electric quantity threshold value or not is detected in real time; if the current status of the ...

The ESDFD located between the load-carrying and the elastic support is shown in Fig. 2a and consists of 3 key components: the elastic support, the friction pairs (consisting of fixed ring and moving ring) and the actuator. The moving ring, fixed ring, and mounting ring are depicted in Fig. 2b, c, and d, respectively. The moving ring is mounted on the end cross ...

Currently, some experts and scholars have begun to study the siting issues of photovoltaic charging stations (PVCSs) or PV-ES-I CSs in built environments, as shown in Table 1.For instance, Ahmed et al. (2022) proposed a planning model to determine the optimal size and location of PVCSs. This model comprehensively considers renewable energy, full power ...

DOI: 10.1109/ICCMC48092.2020.ICCMC-000157 Corpus ID: 216103888; Fault Detection of Electric Vehicle Charging Piles Based on Extreme Learning Machine Algorithm @article{Gao2020FaultDO, title={Fault Detection of Electric Vehicle Charging Piles Based on Extreme Learning Machine Algorithm}, author={Xinming Gao and Gaoteng Yuan and Mengjiao ...

of Wind Power Solar Energy Storage Charging Pile Chao Gao, Xiuping Yao, Mu Li, Shuai Wang, and Hao Sun Abstract Under the guidance of the goal of "peaking carbon and carbon neutral-ity", regions and energy-using units will become the main body to implement the responsibility of energy conservation and carbon reduction. ...

The MHIHHO algorithm optimizes the charging pile's discharge power and discharge time, as well as the energy storage's charging and discharging rates and times, to ...

This article presents the optimal placement of electric vehicle (EV) charging stations in an active integrated

distribution grid with photovoltaic and battery energy storage systems (BESS), respectively. The increase in the population has enabled people to switch to EVs because the market price for gas-powered cars is shrinking. The fast spread of EVs ...

Smart photovoltaic energy storage charging pile is a new type of energy management mode, which is of great significance to promoting the development of new energy, optimizing the energy structure, and improving the reliability and sustainable development of the power grid. The analysis of the application scenarios of smart photovoltaic energy ...

This paper proposes an energy storage pile power supply system for charging pile, which aims to optimize the use and manage-ment of the energy storage structure of charging pile and increase the ...

Moreover, a coupled PV-energy storage-charging station (PV-ES-CS) is a key development target for energy in the future that can effectively combine the advantages of photovoltaic, energy storage and electric vehicle charging piles, and make full use of them. The photovoltaic and energy storage systems in the station are DC power sources, which ...

A DC Charging Pile for New Energy Electric Vehicles Weiliang Wu1 · Xiping Liu1 · Chaozhi Huang1 Received: 4 January 2023 / Revised: 27 March 2023 / Accepted: 2 April 2023 / Published online: 24 April 2023 ... and the advantages of new energy electric vehicles rely on high energy storage density batteries and ecient and fast charg-ing ...

The energy storage charging pile achieved energy storage benefits through charging during off-peak periods and discharging during peak periods, with benefits ranging from 699.94 to 2284.23 yuan ... " A new noncontact detection method for assessing the aging state of composite insulators, " in IEEE Transactions on Industrial Informatics, doi: 10. ...

Vehicle-to-Grid (V2G) is a technology that enables electric vehicles to use smart charging methods to harness low-cost and renewable energy when it is available, and obtain income by feeding ...

Nowadays, AC charging piles are widely used, and with the increasing number of charging piles, the harmonic pollution generated by them becomes more serious and affects the power quality of the grid. Aiming at the problem of harmonic control of the single-phase AC charging pile, it is decided to apply the active filter technology. The single-phase parallel ...

Reference 5 developed a distributed energy management system based on multiagent system for efficient charging of electric vehicles. The energy management system proposed by this method reduces the peak ...

Lithium-ion batteries, with their high energy density, long cycle life, and non-polluting advantages, are widely used in energy storage stations. Connecting lithium batteries in series to form a battery pack can achieve the

required capacity and voltage. However, as the batteries are used for extended periods, some individual cells in the battery pack may ...

Reference 5 developed a distributed energy management system based on multiagent system for efficient charging of electric vehicles. The energy management system proposed by this method reduces the peak charging load and load change of electric vehicles by about 17% and 29% respectively, without moving and delaying the charging of electric ...

In addition, as concerns over energy security and climate change continue to grow, the importance of sustainable transportation is becoming increasingly prominent [8]. To achieve sustainable transportation, the promotion of high-quality and low-carbon infrastructure is essential [9]. The Photovoltaic-energy storage-integrated Charging Station (PV-ES-I CS) is a ...

The gradual transition from a traditional transportation system to an intelligent transportation system (ITS) has paved the way to preserve green environments in metro cities. Moreover, electric vehicles (EVs) seem to be beneficial choices for traveling purposes due to their low charging costs, low energy consumption, and reduced greenhouse gas emission. ...

It considers the attenuation of energy storage life from the aspects of cycle capacity and depth of discharge DOD (Depth Of Discharge) [13] believes that the service life of energy storage is closely related to the throughput, and prolongs the use time by limiting the daily throughput [14] fact, the operating efficiency and life decay of electrochemical energy ...

During the charging process of electric vehicles (EV), the circuit inside the charger plug is connected in series, the charger input voltage does not match the rated input voltage, the temperature caused by the severe heating of the charging time is too high for too long, and other factors are very likely to trigger a fire in the vehicle charging pile. In this paper, ...

The traditional charging pile management system usually only focuses on the basic charging function, which has problems such as single system function, poor user experience, and inconvenient management. In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging ...

With the increasing number of electric vehicles, V2G (vehicle to grid) charging piles which can realize the two-way flow of vehicle and electricity have been put into the market on a large scale, and the fault maintenance of charging piles has gradually become a problem. Aiming at the problems that convolutional neural networks (CNN) are easy to overfit and the ...

With the increasing number of electric vehicles, V2G (vehicle to grid) charging piles which can realize the two-way flow of vehicle and electricity have been put into the market on a large scale, and the fault

maintenance of ...

The promotion of electric vehicles (EVs) is an important measure for dealing with climate change and reducing carbon emissions, which are widely agreed goals worldwide. Being an important operating mode for electric vehicle charging stations in the future, the integrated photovoltaic and energy storage charging station (PES-CS) is receiving a fair ...

Based on PV and stationary storage energy Stationary storage charged only by PV Stationary storage of optimized size EV battery filling up to 6 kWh on average User acceptance for long, slow charging Fast charging mode Charging power from 7 kW up to 22 kW Based on public grid energy Stationary storage power limited at 7 kW User acceptance of higher

Because of the popularity of electric vehicles, large-scale charging piles are connected to the distribution network, so it is necessary to build an online platform for monitoring charging pile operation safety. In this paper, an online platform for monitoring charging pile operation safety was constructed from three aspects: hardware, database, and software ...

The existing methods cannot effectively obtain the response signals generated by multiple defects of the pile body, which leads to the inaccuracy of the pile foundation integrity detection results, a high-rise building pile foundation integrity detection method based on the reflected wave method is proposed. The continuous wavelet transform coefficient is used to ...

Fig. 13 compares the evolution of the energy storage rate during the first charging phase. The energy storage rate q sto per unit pile length is calculated using the equation below: (3) q sto = m ? c w T i n pile-T o u t pile / L where m ? is the mass flowrate of the circulating water; c w is the specific heat capacity of water; L is the ...

Keywords: Charging pile energy storage system Electric car Power grid Demand side response 1 Background The share of renewable energy in power generation is rising, and the trend of energy ... and avoiding the peak detection is an effective way to reduce the electricity fee. In the machine learning algorithm, in addition to considering daily ...

The key to battery management systems (BMS) is an accurate and real-time prediction on State of Charge (SOC) of the power battery. The methods of estimating SOC of power battery were analyzed.

New Energy Vehicle Charging Pile Solution 09-10-2022. ... With a digital platform, the cloud platform can realize collection, storage and analysis of multi-source data in new energy businesses. In this way, it provides upper-layer applications with data support, and provides the SGCC with decision-making basis on distribution transformer load ...
