In 2019, shell acquired greenlots, a US charging infrastructure company, to accelerate the expansion of the North American electric vehicle market. In the same year, shell opened up the charging pile Market in Southeast Asia for the first time and set up the electric vehicle charging pile business in Singapore.

Assuming there are T charging piles in the charging station, the power of single charging pile is p, the number of grid charging pile is S, and the number of storage charging pile is R. For this reason, the maximum power provided by the grid to the charging station is quantified as S, which means S EVs can be charged at the same time.

In addition, as concerns over energy security and climate change continue to grow, the importance of sustainable transportation is becoming increasingly prominent [8]. To achieve sustainable transportation, the promotion of high-quality and low-carbon infrastructure is essential [9]. The Photovoltaic-energy storage-integrated Charging Station (PV-ES-I CS) is a ...
