If we liken the energy storage system to the human body, EMS acts as the brain, determining the tasks performed, establishing reasonable work and rest patterns, and enabling self-protection in case of accidents. Different demands exist for EMS in source-grid side energy storage and industrial and commercial energy storage:

Alongside those, the EMS is also designed to offer lower latency in responding to grid signals, in other words boosting an already split-second response times, which Ruchira Shah says is going to be vital for asset owners looking to participate in increasingly sophisticated classes of ancillary and system stability services applications.

The Energy Management System (EMS) allows the optimal scheduling of energy resources and energy storage systems in MG in order to maintain the balance between supply and demand at low cost.

There are four different energy storage operating modes available: (1) Self Use (2) Feed In Priority (3) Backup (4) Off Grid. You can turn these modes on and off by following this path: Advanced Settings > Storage Energy Set > Storage Mode Select > use the Up and Down buttons to cycle between the four modes and press Enter to select one.
