3. Locate the battery in front of the X member with a battery box I can get from a local race shop. Easy access for service. Simple solution. I would like to keep the battery in the rear of the car if I can convince myself it is worth the extra effort. If anyone has put the battery in the location listed in 1 or 2, could you post some pictures?

Supposedly AGM batteries have a longer life, hold a storage charge longer and are more resistant to temperature extremes and vibration. I'm mounting mine in the traditional FFR location behind the waterfall and in front of the IRS. However, I will have top access to R/R the battery since I relocated the fuel tank.

The battery location in a Ford Five Hundred can typically be found in the engine bay, but may be in the trunk, fender or inside of the vehicle. The Find My Network feature allows you to locate your iPhone even when it is offline, in power reserve mode, or when the phone is shut off. If your iPhone is not connected to cellular or Wi-Fi and is offline, Find My Network will still allow you to track down your handset if it is compatible with the Find My app, and runs on iOS 15.

I've searched a lot but I am having a heck of a time finding pictures of battery in the standard location in the trunk. Background: I don't want to move the battery to the front and I am going with IRS, so FFMetals drop box doesn't work. I might do two 6v batteries and do my own drop box, but I want to see how bad the standard position is first.

The main battery ground I installed is visible. There are a couple more for the harness in the cockpit. The advantage of the one-piece steel chassis is that you can get a solid ground anywhere you have a clean and tight connection. It's a common mod for the Roadster to move the battery from the stock rear location to the front.
