Flexible solar panels are a type of photovoltaic panel that can be bent and molded to fit various surfaces, including curved and irregular shapes. Their manufacturing process usually involves the usage of thin-film solar cells. These solar cells are embedded into a flexible substrate, such as plastic or metal.

The conventional solar panels most residential solar companies install are made of monocrystalline silicon solar cells and are rigid rectangles, typically installed on sturdy rooftop racks.

Flexible and transparent thin-film silicon solar cells were fabricated and optimized for building-integrated photovoltaics and bifacial operation.
