

f is the filter capacitor, L2 is the grid-side inductance, Lg is the grid impedance, ug is the grid voltage, ux (x = a, b, c) is the three-phase AC voltage output by the arm, u cf is the capacitor voltage of the LCL filter, i cf is the capacitor current of the LCL filter, i1 is the inverter-side inductance current, and i2 is the grid ...

In this study, a multi-loop control has been applied in the LCL-type grid-connected inverter based on capacitor current feedback control method. Computational delays in the control unit can ...

The first method consists in using multi-module GCSC (MGCSC), ... connection to the grid, active and passive components, and control approaches . Table 1. Dualities of GCSC and TCR . GCSC TCR; ...

For the LCL-type grid-connected inverter, when the capacitor voltage feedforward is applied, the delay in the digital control system could change the phase ...

In order to solve the aforementioned problems, this study proposes a feedforward phase compensation method of LCL grid-connected inverter based on the all-pass filter (AF). By introducing AF into the CVF channel, the phase lag in the range of reverse resonance peak frequency is compensated, so as to enhance the robustness of the system in ...

2.1 Compensation using series capacitors 4 2.2 Parallel compensation 4 2.3 Ballast Directive 2000/55/EC and compensation of lighting systems 5 2.4 Uniform compensation method 6 3 Metallised Polypropylene Film Capacitors 6 3.1 Construction of a metallised polypropylene film capacitor 6 3.2 Capacitors with an automatic cut-out, secured, type B

In order to enhance the adaptability of LCL-filtered grid-connected converters under weak grid operation, this paper proposes an improved capacitor voltage feedforward ...

a) shows the grid voltage ug measured in the lab and it contains 3th, 5th, 7th and 9th harmonic voltages as the FFT analysis in Fig.20(b). Fig.21 shows that without AD method, i2 has a large ...

Static Capacitors: In this method, the capacitors are placed statically in the connection with the power grid. The capacity of capacitors is used toproduce and attract reactive power to compensate the reactive power flow. This method is usually used for larger systems with higher power. It should also be noted that the use of capacitors in reactive power compensation ...

In the fixed capacitor bank method, one capacitor is used across each load, which is ... Inrush issues during connection and/or disconnection while attempting to leave the system. The compensator's major component is the controller. The observed voltage and current quantities are delivered to the controller at PCC using the PT and CT, respectively. The ...

Passivity-based design gains much popularity in grid-connected inverters (GCIs) since it enables system stability regardless of the uncertain grid impedance. This paper devotes to a systematic passivity-based design guidance for the LCL-filtered GCI with inverter current control and capacitor-current active damping. It is found that the passivity can be ...

a digital delay; (...

In this article, we propose reactive compensation for the PV integrated grid system using a STATCOM and a fixed capacitor bank. This paper presents a design calculation for a PV integrated grid ...

Voltage Sag Enhancement of Grid Connection Hybrid PV-Wind Power System Snehal Kailas Sukhadeve PG Student Department of Electrical Engineering Wainganga Collage of Engineering & Management Nagpur, India snehalsukhadeve25@gmail Prof. Ankita Mankar Assistant Professor Department of Electrical Engineering Wainganga Collage of Engineering & ...

A grid-connected system with capacitor voltage damp-ing control using parallel feedforward compensation method has been investigated under grid impedance vari-ation in Faiz (2019) leading to THD = 4.35%. A robust frequency-adaptive current control using linear matrix inequality-linear quadratic regulator (LMI-LQR) approach

To address this issue, this study proposes a method to completely compensate the time delay by introducing a second-order compensator reshaped from the conventional Biquad filter in ...

From the experimental results, recorded 34.2% of unbalance rate of the three-phase grid current before compensation is reduced to 2.8% by the power-based compensation method, and 1.2% by the current-based compensation method. This study provides a new insight into developing the advanced algorithms which improves the unbalance of three-phase ...

Request PDF | On May 1, 2019, Danish Khan and others published An Improved Capacitor Current Active Damping Based on Parallel Feed-Forward Compensation Method for LCL Filtered Grid Connected ...

This type of compensation method demands capacitor banks to have wide range of power regulation, ... electric grid load is minimized, since reactive power is generated at the device terminals. Figure 3 - Individual installation of capacitors . This method does not require controlling devices, since capacitor banks are being switched on and off by means of ...

Abstract: Active damping is a popular approach to suppress the resonance in LCL-filtered grid-connected inverter owing to lossless damping and efficient system design. In ...

This paper presents a design method based on the extended harmonic domain modeling for L and LCL passive filters of active-front-end PWM two-level voltage source converters for grid-connected ...

Capacitor-current-feedback active damping is an effective method to suppress the LCL-filter resonance in grid-connected inverters. However, due to the ...

Fig. 1 shows the structure of a single-phase LCL grid-connected inverter connected to the weak grid, where V in is the dc-link voltage, LCL filter is composed of inverter-side inductor L 1, filter capacitor C, and grid-side inductor L 2; Z g is the grid impedance since the resistor in grid impedance tends to increase the phase margin (PM) of the grid-inverter ...

proposed a time delay compensation method based on area equivalent principle. This method is simple and effective, but it can only compensate for the computation time delay with lower than half of the sampling period (<0.5Ts), and the signal aliasing problem still exists. Li et al. [17] proposed an improved capacitor current feedback AD to extend the damping region to fs/4 by ...

Passive compensation with fixed steps and filters is a traditional method that reaches its limits in dynamic networks with fluctuating loads. Modern active compensation methods such as APF (Active Power Filters) and SVG (Static Var Generators) offer flexible and fast adaptation to changing load conditions, thus improving the grid quality more efficiently.

In conventional linear control strategies, capacitor-current feedback AD method [16,17,18], capacitor-voltage feedback AD method [19, 20], and multiple state variables feedback AD method are extensively used in PWM-based systems to eliminate the resonant effects. Generally, the principle of the above methods can be regarded as the different state variables ...

feedback [12,13]. The leading link with delay compensation is used to replace the propor- tional link in the controller [14]. The delay compensation method based on the state esti- mation method is used to reduce the influence of the digital delay on the active damping properties [15]. Liu et al. [16] proposed a second-order lead-lag ...

The dual-feedback control combining inverter current control and capacitor-current active damping is widely applied for LCL-type grid-connected inverters. This paper ...

Grid-connected inverters are an important part of the connection between distributed power generation units and the large grid, and their stability is the basis for ensuring the safe operation of distributed power generation units. This study found that there is an inherent digital control delay in the three-phase LCL grid-connected inverter system. This characteristic ...

Pan? et al. present an unbalanced capacitor compensation in a delta connection to mitigate the load unbalance

as well as providing the reactive power compensation in a three-phase three-wire network. To overcome rapid and large variations of active and/or reactive loads, the capacitive shunt compensators have to be controlled by the ...
