Types of heat sinks There are two primary types of heat sinks. 1. Active heat sink - uses a cooling fan to cool down the heat sink via a forced air convection process -- offering high cooling performance. You can hear these fans in laptops and PCs. 2. Passive heat sinks - use zero fans and are more reliable because there are no moving ...

As an alternative heat sink, selecting the 15 x 15 x 12.5 mm Ohmite BGAH150-125E with a greater surface area due to a greater fin height, reduces the total thermal resistance of the heat sink and TIM to 11°C/watt. This would lower the case temperature to about 67°C for about the same cost and provide a greater temperature margin.
