OverviewHistoryExplanationAdvantages and disadvantagesTheory of operationTransformer designPower factorTypesA switched-mode power supply (SMPS), also called switching-mode power supply, switch-mode power supply, switched power supply, or simply switcher, is an electronic power supply that incorporates a switching regulator to convert electrical power efficiently. Like other power supplies, an SMPS transfers power from a DC or AC source ...

In both cases, in a DC-DC conversion stage, a primary circuit of power semiconductors (a power switch circuit) generates a high frequency alternating voltage to a transformer. This causes a current in the primary windings that will induce an alternating current in the secondary windings, so a secondary voltage is built up.

Novel compact high frequency high voltage (HV) power supply is introduced for small volume, lightweight, ultra fast high voltage output application. The two key factors high frequency HV transformer and voltage multiplier diodes are evaluated in this paper. The HV resonant tank size is only 1L for 400kHz~500kHz 35kV 2kW output, the rise time for output HV is around 100us by ...

Self-Resonant Frequency and Impedance The self-resonant frequency (f_R) of an inductor is the lowest frequency at which the inductor resonates with its self-capacitance. At the resonant frequency, the impedance is at its maximum peak, and the effective inductance is zero. Figure 8 shows the inductor's circuit model. Figure 8: Inductor Circuit ...

In a system circuit, it is necessary to maintain a clean signal. For bypass capacitors connected to a DC power supply, a clean DC signal can be achieved by shorting the high-frequency AC noise to the ground. One end of the bypass capacitor is connected to the power supply pin while the other end is connected to the ground.

A power system is a network of electrical parts that generate, transmit, and distribute electricity. The system operates at a specific frequency, measured in hertz (Hz), which is the number of cycles per second of the alternating current (AC) voltage and current. Common frequencies are 50 Hz and 60 Hz,...
