When connecting a capacitor across L1 and L2, you must use a voltage-rated capacitor of at least 125% of the peak line voltage, which is 1.414 times RMS (root mean square) voltage. In other words, if you have a 120 VAC supply, you need at least a 150 VAC rated capacitor ( $1.25 \times 120 \text{ V} = 150 \text{ V}$ ).

Capacitors Low-voltage and high-voltage capacitors. Historically, first polymer capacitors (late 1990's) were manufactured using in-situ polymerization of PEDOT (poly 3,4- ethylenedioxythiophene) by chemical reaction between the oxidizer and monomer [22]. The parts had lower ESR than MnO<sub>2</sub> capacitors,
