There are two common geometries: axial and radial. Axial capacitors have one pin on each end of the cylinder, while in the radial geometry, both pins are located on the same end of the cylinder. Electrolytic capacitors have a larger capacitance than most other capacitor types, typically 1µF to 47mF. There is a special type of electrolytic ...

Capacitor Polarity Axial axial capacitor polarity. In axial capacitors, the terminals are typically located at opposite ends of the cylindrical body and extend outward in the same axis as the body. One terminal is designated as positive (+), while the other is negative (-), indicating the polarity of the capacitor. Here"s a brief explanation:
