Compressed-air energy storage plants can take in the surplus energy output of renewable energy sources during times of energy over-production. This stored energy can be used at a later time when demand for electricity increases or energy resource availability decreases. [13] Compression of air creates heat; the air is warmer after compression.

levels of renewable energy from variable renewable energy (VRE) sources without new energy storage resources. 2. There is no rule-of-thumb for how much battery storage is needed to integrate high levels of renewable energy. Instead, the appropriate amount of grid-scale battery storage depends on system-specific characteristics, including:
