Importantly, there is an expectation that rechargeable Li-ion battery packs be: (1) defect-free; (2) have high energy densities ( $\sim 235 \text{ Wh kg}^{-1}$ ); (3) be dischargeable within 3 h; (4) have charge/discharge cycles greater than 1000 cycles, and (5) have a calendar life of up to 15 years. 401 Calendar life is directly influenced by factors like ...

Batteries and similar devices accept, store, and release electricity on demand. Batteries use chemistry, in the form of chemical potential, to store energy, just like many other everyday energy sources. For example, logs and oxygen both store energy in their chemical bonds until burning converts some of that chemical energy to heat.
