Importantly, there is an expectation that rechargeable Li-ion battery packs be: (1) defect-free; (2) have high energy densities (~235 Wh kg⁻¹); (3) be dischargeable within 3 h; (4) have charge/discharge cycles greater than 1000 cycles, and (5) have a calendar life of up to 15 years. Calendar life is directly influenced by factors like ...

Batteries and similar devices accept, store, and release electricity on demand. Batteries use chemistry, in the form of chemical potential, to store energy, just like many other everyday energy sources. For example, logs and oxygen both store energy in their chemical bonds until burning converts some of that chemical energy to heat.
