Likewise, in addition to increasing efficiency, reducing the size and weight of power conversion equipment is critical. Smaller, lighter-weight components typically correspond to lower capital expense (CAPEX), which complements the reductions in operating expense (OPEX) associated with greater efficiency.

Charging and converting. Battery charger efficiency can be more difficult to calculate than AC-DC power-supply conversion efficiency. In batteries, the conversion efficiency is the amount of energy stored in the battery in relation ...

The table above clearly shows us that whilst the lithium-ion battery is more expensive than an AGM battery, it works out to be cheaper when you consider the cost per cycle over its lifetime. The life cycle of the lithium-ion battery is unmatched and is something to consider if you want a "fit and forget" electrical system in your camper van.

The Gambia is abundant with biodiversity and coastal, urban and rural communities. Yet slowly they are being drowned by plastic. Discarded plastics are affecting fishermen along the coast, which reduces their catch rate. Rivers and mangroves are seeing plastic waste accumulate in the roots of trees, causing negative effects on the oyster farmers.

Choosing the right battery for an electric vehicle (EV) conversion is a particularly important step in the EV conversion process. If the battery pack does not match the drivetrain, the desired performance and range cannot be realized and there is also an additional risk of damaging the drivetrain components or the batteries themselves.
