However, to truly harness the potential of solar energy, connecting the solar panels to an inverter is essential. The inverter serves as the heart of the solar power system, converting the direct current (DC) electricity produced by the solar panels into alternating current (AC) electricity, which is suitable for powering homes and businesses.

How do solar power actually work in the home from solar panels? When they are installed, fitted on the roofs, where is the connection between panels to power the house? How does it change from original electrical power supply to the whole house? Does re-wiring need to be done to connect solar energy to work in the house?

The output need to be connected to the grid power. Can not supply power directly to the AC loads. DO NOT use solar controller load ports to connect to the inverter; Only use the 36V/48V battery to power the inverter; Use a battery to power the inverter, please use a circuit breaker. The limiter wiring does not exceed 66 feet.
