A battery is a device that stores chemical energy and converts it into electrical energy. Batteries come in different types and sizes, but they all have a positive and negative terminal. The positive terminal of a battery is usually marked with a plus sign (+), while the negative terminal is marked with a minus sign (-). When you connect a wire to the positive ...

When I add the second stack of 4 modules (4 separate DC cables going to the Lynx Distributor), do I just carry on with the link cables (bottom module of stack 1 to top module of stack 2) and treat it as one large battery bank, or do I run a second CAN cable to the Cerbo GX and it somehow deals with the dual battery stacks, or is the PylonTech hub required?

Lithium-ion batteries are extremely power dense and over the last 10 years, the cost of a given amount of lithium-ion energy has come down 10-fold. There are, however, two major shortcomings when it comes to lithium-ion battery cells. First, the capacity of a single cell is quite low. At the time of this writing, a single cell or series chain of 18650 cells will have a ...
