Some brands, like Champion and Generac, parallel two generators by connecting them to a central outlet where you can plug in your RV cord or other appliances. Others, like Honda, simply use cables to connect the two generators, at which point you can connect your appliance directly to the 30-amp power supply on the generator.

A Remote Power Option. If you have a remote cabin, barn, or shed without power and it's too far away for an extension cord, you could also consider a car battery power bank as a power source. You could recharge the batteries at home or use your vehicle as a remote charging station for your remote battery bank, that way you can use power tools or anything else that requires ...

The use of alternating current means that power cords have "hot" and "neutral" wires, rather than "positive" and "negative." If you have a polarized appliance cord, the neutral wire is identified by a white stripe, ribbing or white insulation. The hot wire has no ribbing or stripe, or it may be coated with black or red insulation.

Using a screwdriver, loosen the screws that secure the old power cord and carefully disconnect it from the appliance. Prepare the new power cord: Before connecting the new power cord, you may need to strip the insulation from the wires. Use wire strippers to remove about half an inch of the insulation from the ends of each wire in the power cord.

How to connect the power cord of the battery to the home appliance
